Why Invest in this fund?

- Diversifying portfolio exposure - an emerging markets ex-China strategy can complement a standalone China equity allocation or support investors who wish to separate their China exposure from emerging markets.
- Capitalizing on growth potential - allows investors to strike a balance between China and other emerging markets exposure. The strategy can help mitigate the risk of overlooking countries with attractive valuations.
- Active management - quantitative approach leverages computing power and cutting-edge technology to help harvest the best opportunities across a wide range of countries.

Risk Tolerance

LOW MEDIUM HIGH

Inception date: Apr. 2024

* Effective June 1, 2022, the redemption charge purchase option, and the low-load purchase option are no longer available for purchase, including those made through systematic purchase plans such as pre-authorized contribution plans. Switching from securities of a Mackenzie Fund previously purchased under the redemption charge or low-load purchase options to securities of another Mackenzie Fund, under the same purchase option, will continue to be available until such redemption schedules expire.

** The major holdings of the Fund may, but do not necessarily, represent the largest holdings of the Fund. Rather, the major holdings are selected for their overall significance in evaluating the investment portfolio.

† Commissions, trailing commissions, management fees, and expenses all may be associated with mutual fund investments. Please read the prospectus before investing. The indicated rates of return are the historical annual compounded total returns as of October 31, 2024 including changes in unit value and reinvestment of all distributions and do not take into account sales, redemption, distribution, or optional charges or income taxes payable by any securityholder that would have reduced returns. Mutual funds are not guaranteed, their values change frequently and past performance may not be repeated. Standard deviation provides a measure of the variability of returns that have occurred relative to the average return. The higher the standard deviation, the greater is the range of returns that has been experienced. Standard deviation is commonly used as a measure of risk.
